

Einstein Analytics:

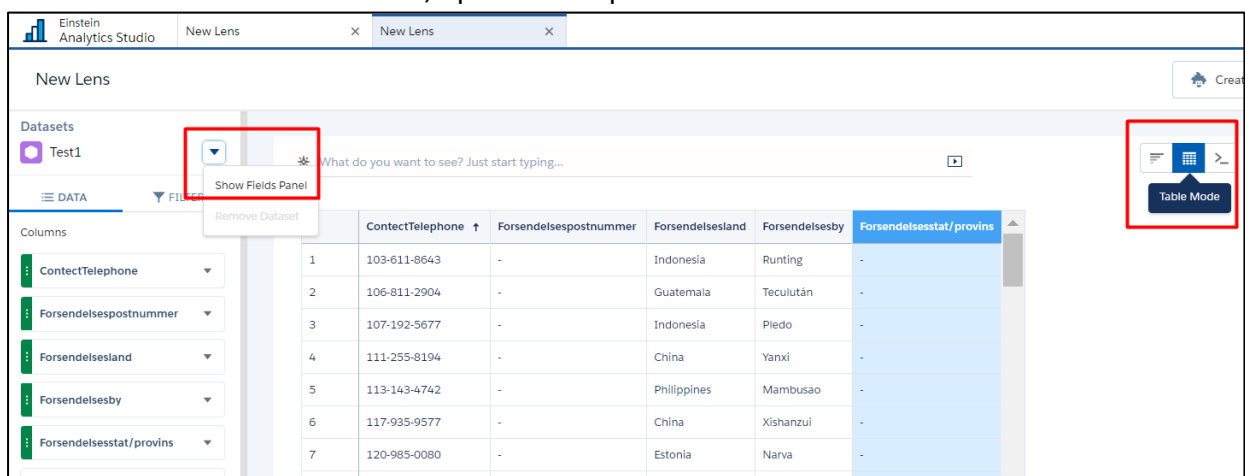

How to change header name in a Dataset

Update: 10/03/2020

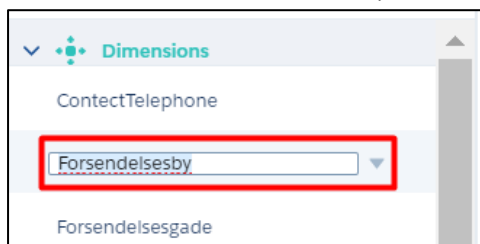

Issue: When I import data from Salesforce to create a Dataset, I realized the headers are in Danish. I suspect it has something to do with my local (set as Denmark). I have tried to update the language in SF>setting, but it doesn't work. Thus, I am manually updating the column headers as following.

Process:

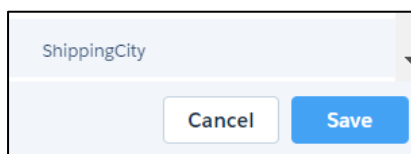

1. Open the dataset to lens and change to "Table Mode"
2. Next to the name of the Dataset, open the drop-down and choose "Show Fields Panel"

3. In the left hand-side window, click on the header name and it would be high-lighted and editable.

4. Enter the new name and hit enter/click away. Then Save.

5. A window pops up with "Changes will be applied to all dashboards and lenses that use the dataset "Test1". Continue?". Click save to confirm and update the changes. You can make changes to multiple headers before saving it.
6. You can close New Lens tab without saving the lens. The changes to the header names have been saved already.
